DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of claims 1-14, 17-20, 22-29, 32-34, 36-42, 44, 45 and 47 in the reply filed on 06/07/2006 is acknowledged. The traversal is on the ground(s) that there is no burden to search all the claimed species. This is not found persuasive because searching extra species creates a serious burden on the Examiner.

Regarding Applicant's election of claims 37-42, 44, 45 and 47, Applicant elected claims 1-36 without traverse for prosecution in the reply filed on 12/15/2005 to the Office action date 11/21/2005. Therefore, claims 37-42, 44, 45 and 47 are withdrawn from consideration.

The requirement is still deemed proper and is therefore made FINAL.

Claim Objections

2. Claim 22 is objected to because of the following informalities: "claim 22" should be likely --claim 21--. Appropriate correction is required. Applicant is further required to correct the numeric order of claims 23-50.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the indicator in claims

7, 14 and 29 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-14, 17-19, 23-29, 32-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gass et al. (US Pub. 2002/0017175 A1), hereinafter Gass, in view of Ghosh et al. (5,436,613), hereinafter Ghosh.

Gass teaches a power tool comprising a working element for performing a task on a workpiece, a brake system 28 and a detecting system for detecting a portion of a user's body coming to close to the working element.

Ghosh teaches the use of an infrared detecting system. See col. 1, lines 24-33. Therefore, it would have been obvious to one skilled in the art to incorporate the infrared detecting system as taught by Ghosh to the Gass' power tool to protect tool operators.

It is to be noted that the light beam creates a visual indication of a detection zone.

6. Claims 22 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gass in view of Ghosh, as applied to claims 8 and 23 above, and further in view of Lange et al. (US Pub. 2003/0169956 A1), hereinafter Lange.

The modified power tool of Gass teaches the invention substantially as claimed except for the light source and the detector being configured as a fiber optic probe.

Lange teaches the common use of fiber optic. See paragraph [0004]. Therefore, it would have been obvious to one skilled in the art to configure the light source and the detector as a fiber optic probe to improve the quality of the light source and the detector.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
